📈 StockScript Journal — Trader Training Guide

1. What is StockScript?

StockScript is a **trading journal** — a place where you log every trade you take and then see charts and numbers that tell you how you're really doing. Think of it as your personal scoreboard.

It works for: Equity, Intraday, Options, and Futures.

You can enter trades **manually** or **import a CSV** from your broker (Zerodha, Groww, Angel One, Dhan).

---

2. Getting Started (Step by Step)

Step 1 — Create Your Account

Open StockScript and click **"Create trader account"** (top-right).

Enter your name, email, and a password (at least 8 characters).

Step 2 — Wait for Admin Approval

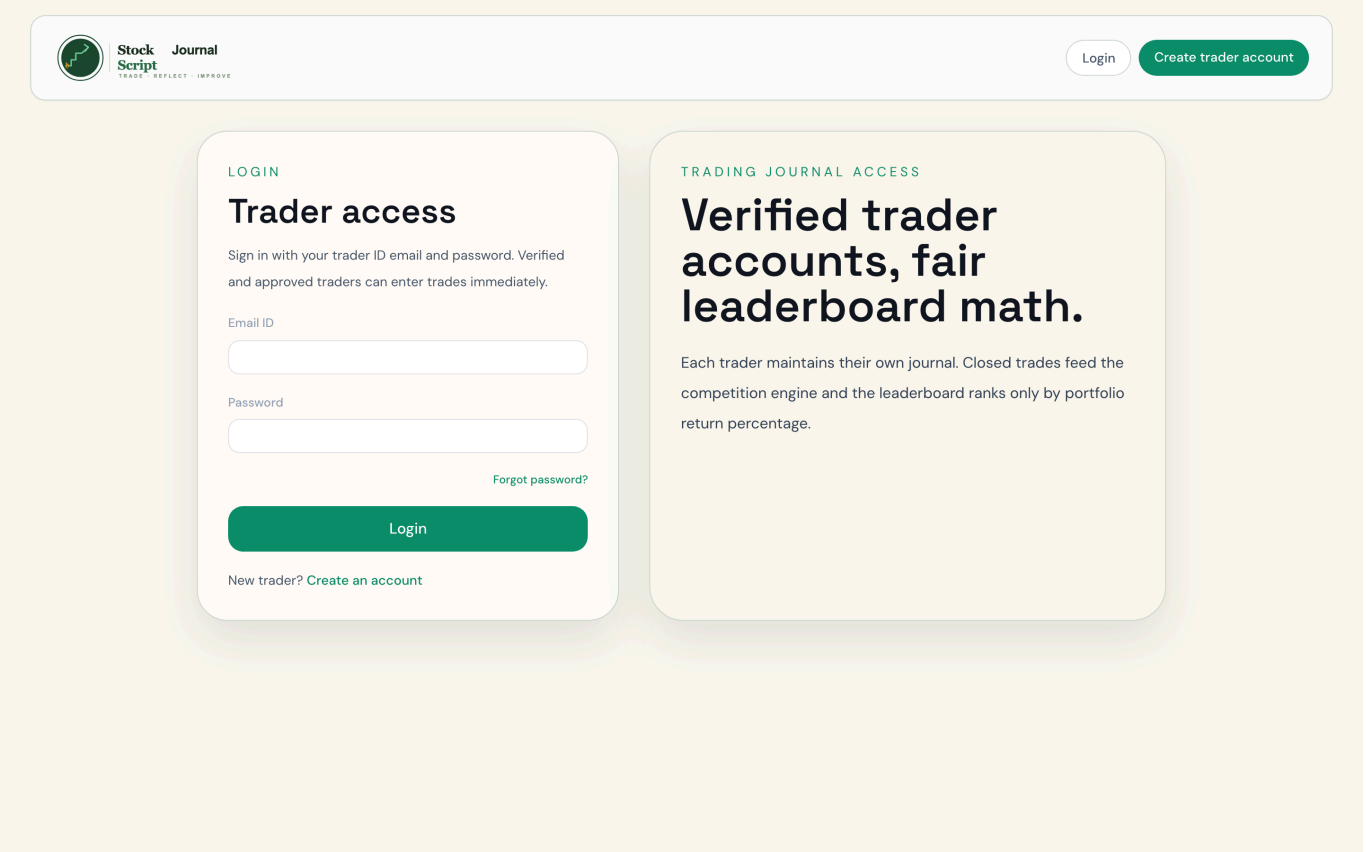

After verification, your account is marked **"Pending Approval"**. An admin needs to approve it. This is just a security check — contact them if it takes too long.

Step 3 — You're In

Once approved, you can log in and start using StockScript. The first thing you should do is set your **Portfolio Capital** on the Account page (the total money you trade with). This makes all your allocation % and impact calculations accurate.

---

3. Logging In

Enter your email and password and click **Login**.

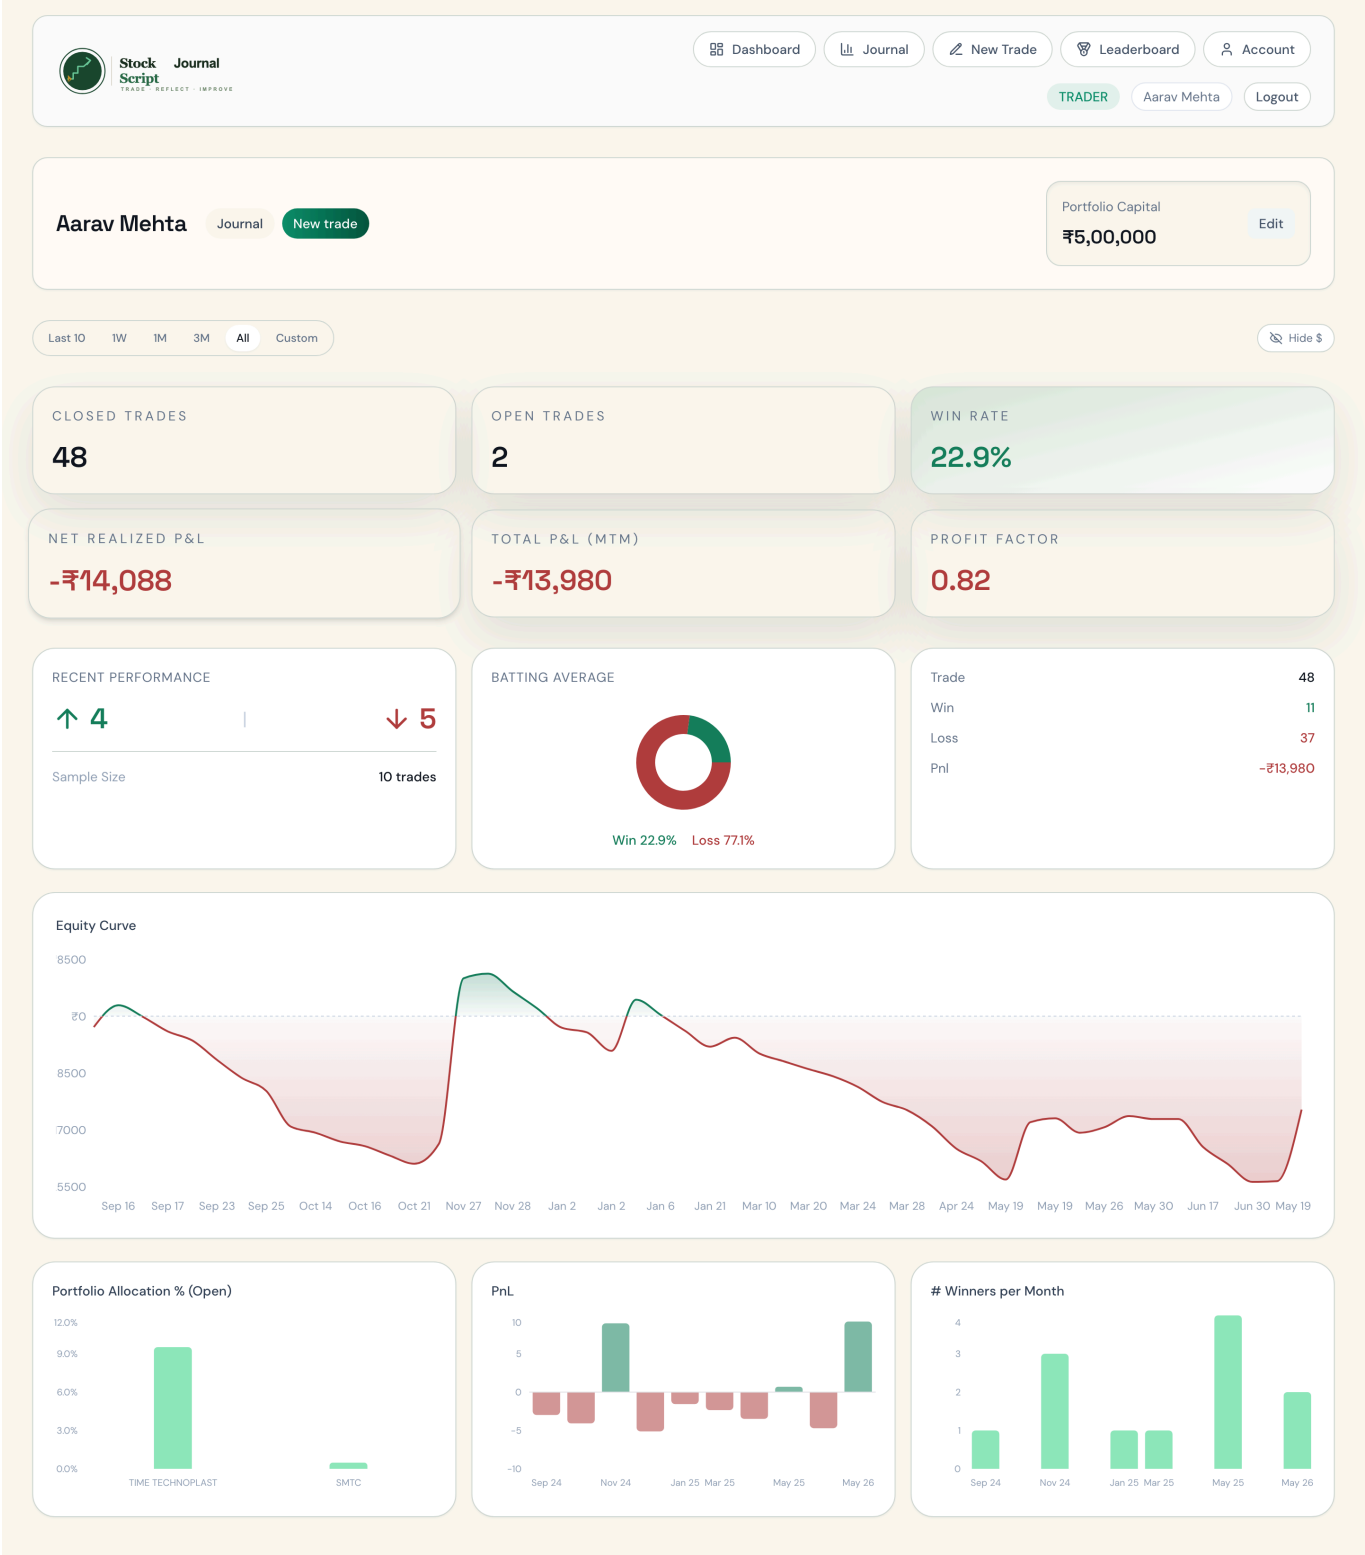

After logging in, you'll see the navigation bar at the top. Here's what each link does:

Page	Use it for...
Dashboard	Your performance overview — charts, numbers, trends
Journal	Your complete trade list — search, filter, edit
New Trade	Add a trade (manual form or CSV import)
Leaderboard	See how you rank in competitions
Account	Your profile and portfolio capital setting

---

4. Dashboard — Your Performance at a Glance

This is the first screen you see after logging in. It shows all your key numbers and charts in one place.

Period Filter (top)

Click **Last 10 / 1W / 1M / 3M / All / Custom** to zoom into specific timeframes.

Use the **Hide $** button to temporarily hide amounts (useful when sharing your screen).

The 6 Metric Cards

Card	What it tells you
Closed Trades	How many trades you've fully completed

Card	What it tells you
Open Trades	Trades still running (no exit yet)
Win Rate	What % of your closed trades were winners
Net Realized P&L	Actual profit/loss from closed trades
Total P&L (MTM)	Realized + paper profit/loss on open trades
Profit Factor	Gross profit ÷ Gross loss. Above 1.0 = profitable

Charts (below the cards)

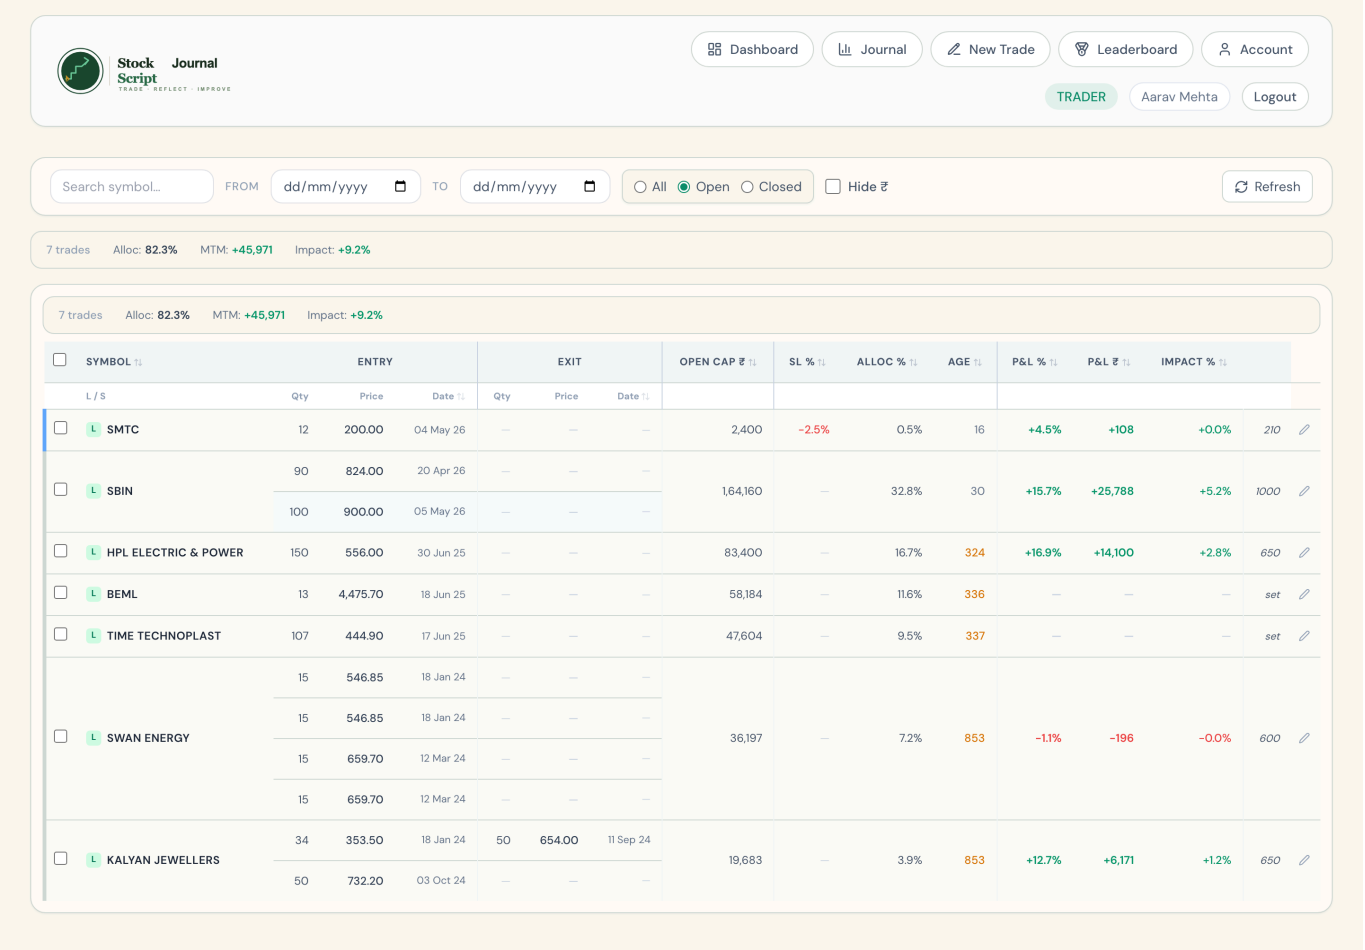

- **Recent Performance** — Winners vs losers in your last 10 trades
- **Batting Average** — A donut chart of your win/loss ratio
- **Equity Curve** — A line chart of your total P&L over time (going up = good!)
- **Portfolio Allocation** — How your capital is split across open trades
- **Monthly P&L** — Green and red bars showing each month's performance
- **Winners per Month** — How many winning trades you had each month

> 💡 **Tip:** Open trades only show in your equity curve if you enter an **EOD Closing Price** (more on this in the Trade Detail section).

---

5. Journal — Your Trade Ledger

Click **Journal** in the navigation to see every trade you've ever logged.

Filtering Trades

Filter	How to use it
Search box	Start typing a symbol name (e.g., "RELIANCE")
From / To	Pick a date range
Open / Closed / All	Radio buttons to filter by status
Hide ₹	Check this to mask amounts

Reading the Table

Each row is one trade for a stock. Key columns:

Column	Meaning
L/S	L = Long (bought first), S = Short (sold first)
Entry	Your buy-in price, quantity, and date
Exit	Your sell-out price, quantity, and date
Open Cap ₹	How much capital you put into this trade
SL %	Stop loss as % of entry price
Alloc %	% of your total portfolio in this trade

Column	Meaning
Age	Days since you entered (turns amber if >30)
P&L % / ₹	Profit or loss — both as % and rupees
Impact %	How this trade affected your total portfolio
EOD	Click "set" to enter today's closing price (for open trades)
Edit ✏️	Click the pencil to change trade details

Selecting Multiple Trades

Check the boxes on the left side to:

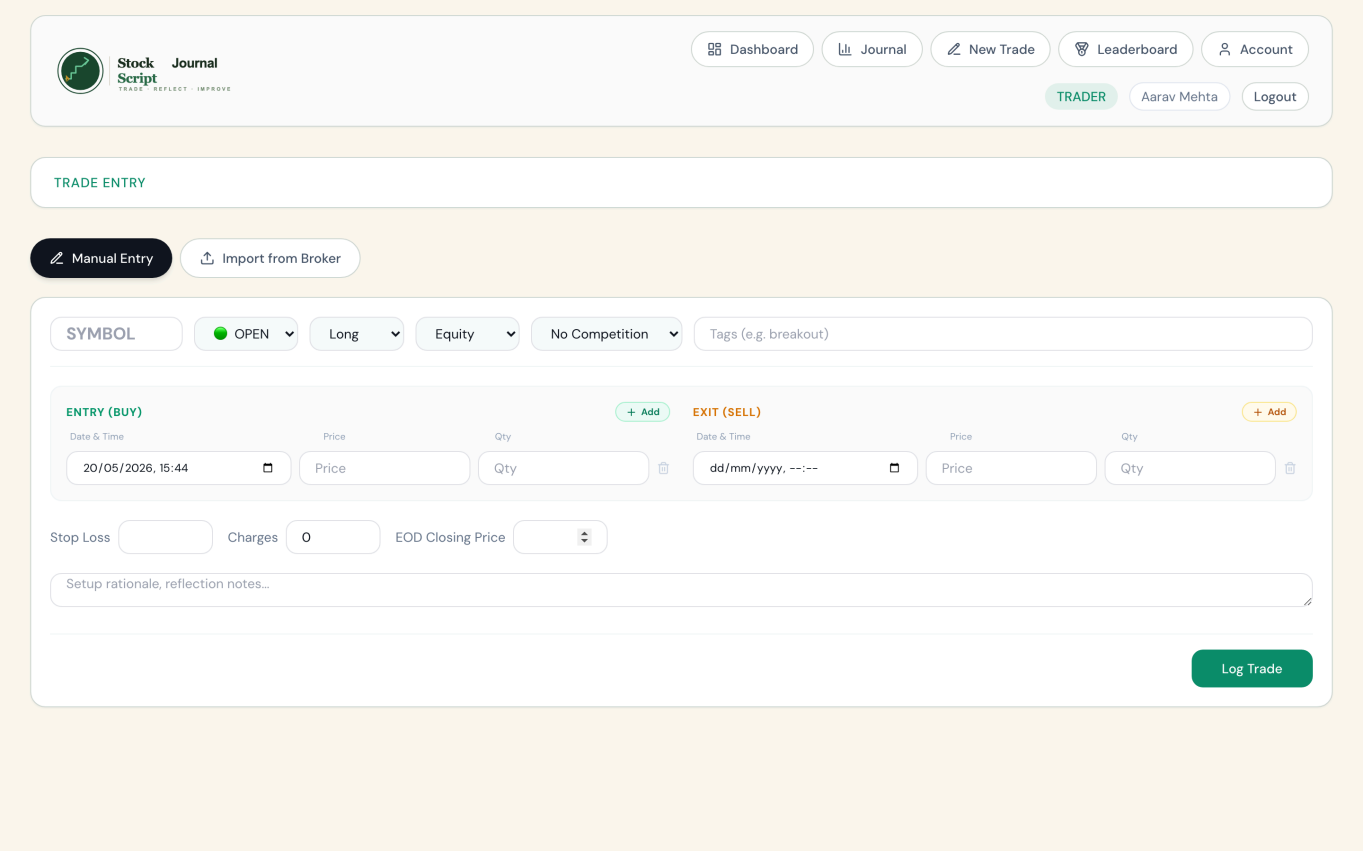

- **Delete** — Remove trades permanently
- **Merge** — Combine two or more trades of the same symbol into one

> 💡 **Tip:** Click any column header to sort by that column (e.g., click "P&L %" to see your best-performing trades first).

---

6. Adding a New Trade

Click **New Trade** in the navigation. You'll see a form like this:

Step 1 — Basic Info (top row)

Field	What to enter
SYMBOL	Stock ticker (e.g., RELIANCE) — auto-capitalized
Status	🟢 OPEN (still holding) or 🔴 CLOSED (sold)
LONG / SHORT	Did you buy first? → Long. Sell first? → Short
Segment	EQUITY / INTRADAY / OPTIONS / FUTURES
Tags	Labels like `breakout` `swing` `scalp` — useful later for filtering
Competition	Only if you're in one

Step 2 — Entry Transactions (green section)

Fill in each time you bought (or sold, for short trades):

- **Date & Time** of the trade
- **Price** you paid/received
- **Quantity**

Click **"+ Add"** if you entered in multiple parts (scaling in).

Step 3 — Exit Transactions (amber section)

Only fill this if the trade is **CLOSED**. Same format as entry. Click **"+ Add"** for partial exits (scaling out).

> ⚠️ Total exit quantity can't be more than total entry quantity.

Step 4 — Extra Fields (below the transaction grid)

Field	Why use it
Stop Loss	Your SL price (for your own tracking — does not auto-execute)
Charges	Brokerage, STT, GST, etc.
EOD Closing Price	For open trades — the day's closing price (used for MTM)
Notes	Why you took the trade, your setup, lessons learned

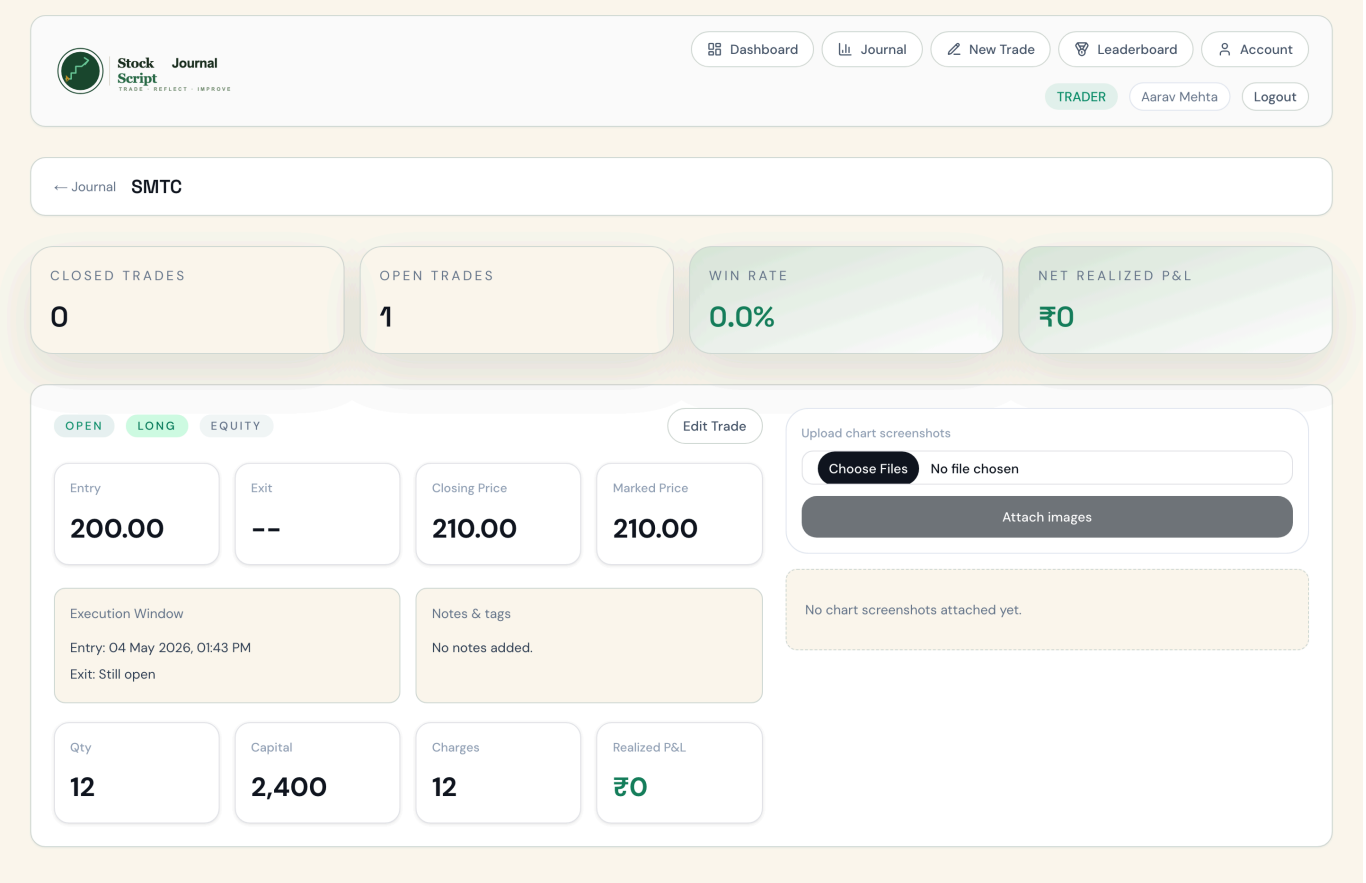

Step 5 — Save

Click **"Log Trade"**. You'll be taken to that symbol's detail page.

---

7. Trade Detail View & Chart Screenshots

Click any symbol name in your Journal to open its detail page.

Here you'll see:

- The **status badge** (OPEN / CLOSED) and type (Long / Short / Segment)
- Entry price, exit price, closing price
- When you entered and exited
- Your notes and tags
- Profit/loss breakdown

Uploading Chart Screenshots

Right on this page, there's an **"Upload chart screenshots"** section:

1. Click **Choose File** and pick your chart images
2. Click **"Attach images"**

These screenshots are private — only you can see them. They're great for reviewing your entries and exits later.

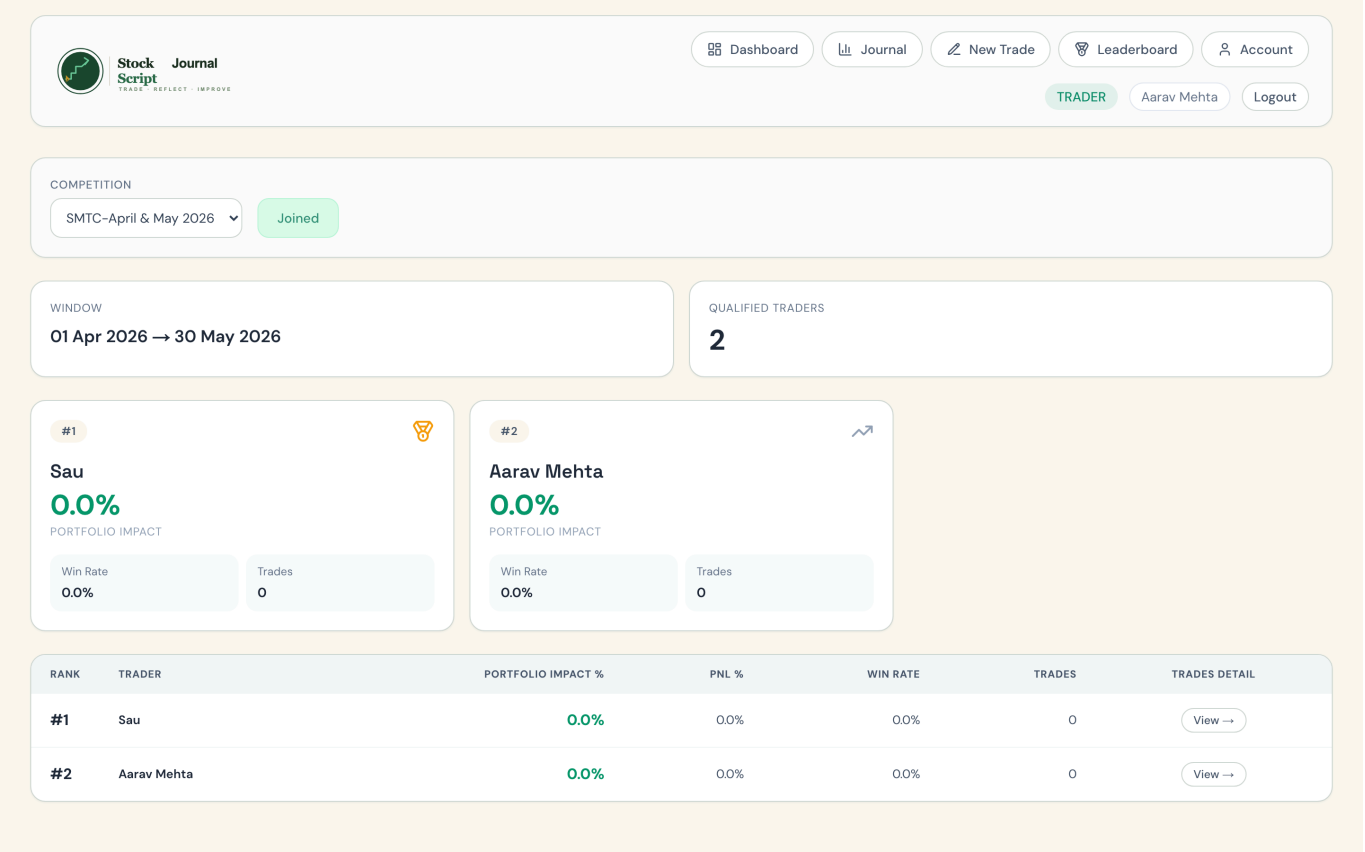

Setting the EOD Closing Price

On the **Journal** page, open trades have a **"set"** link in the EOD column. Click it, type the day's closing price, and press **Enter**. This updates your unrealized profit/loss (Mark-to-Market).

---

8. Leaderboard & Competitions

If your admin has set up competitions, you can join and see how you rank against other traders.

How to Join

1. Click **Leaderboard** in the navigation
2. Pick a competition from the dropdown
3. Click **"Request to Join"**
4. Wait for admin approval

How You're Scored

Your trades are automatically included if their entry date falls within the competition window. You don't need to tag anything manually.

The leaderboard ranks traders by:

- **Portfolio Impact %** — (Total P&L ÷ Max capital used) × 100
- **Win Rate** — % of profitable trades
- **Number of Trades**

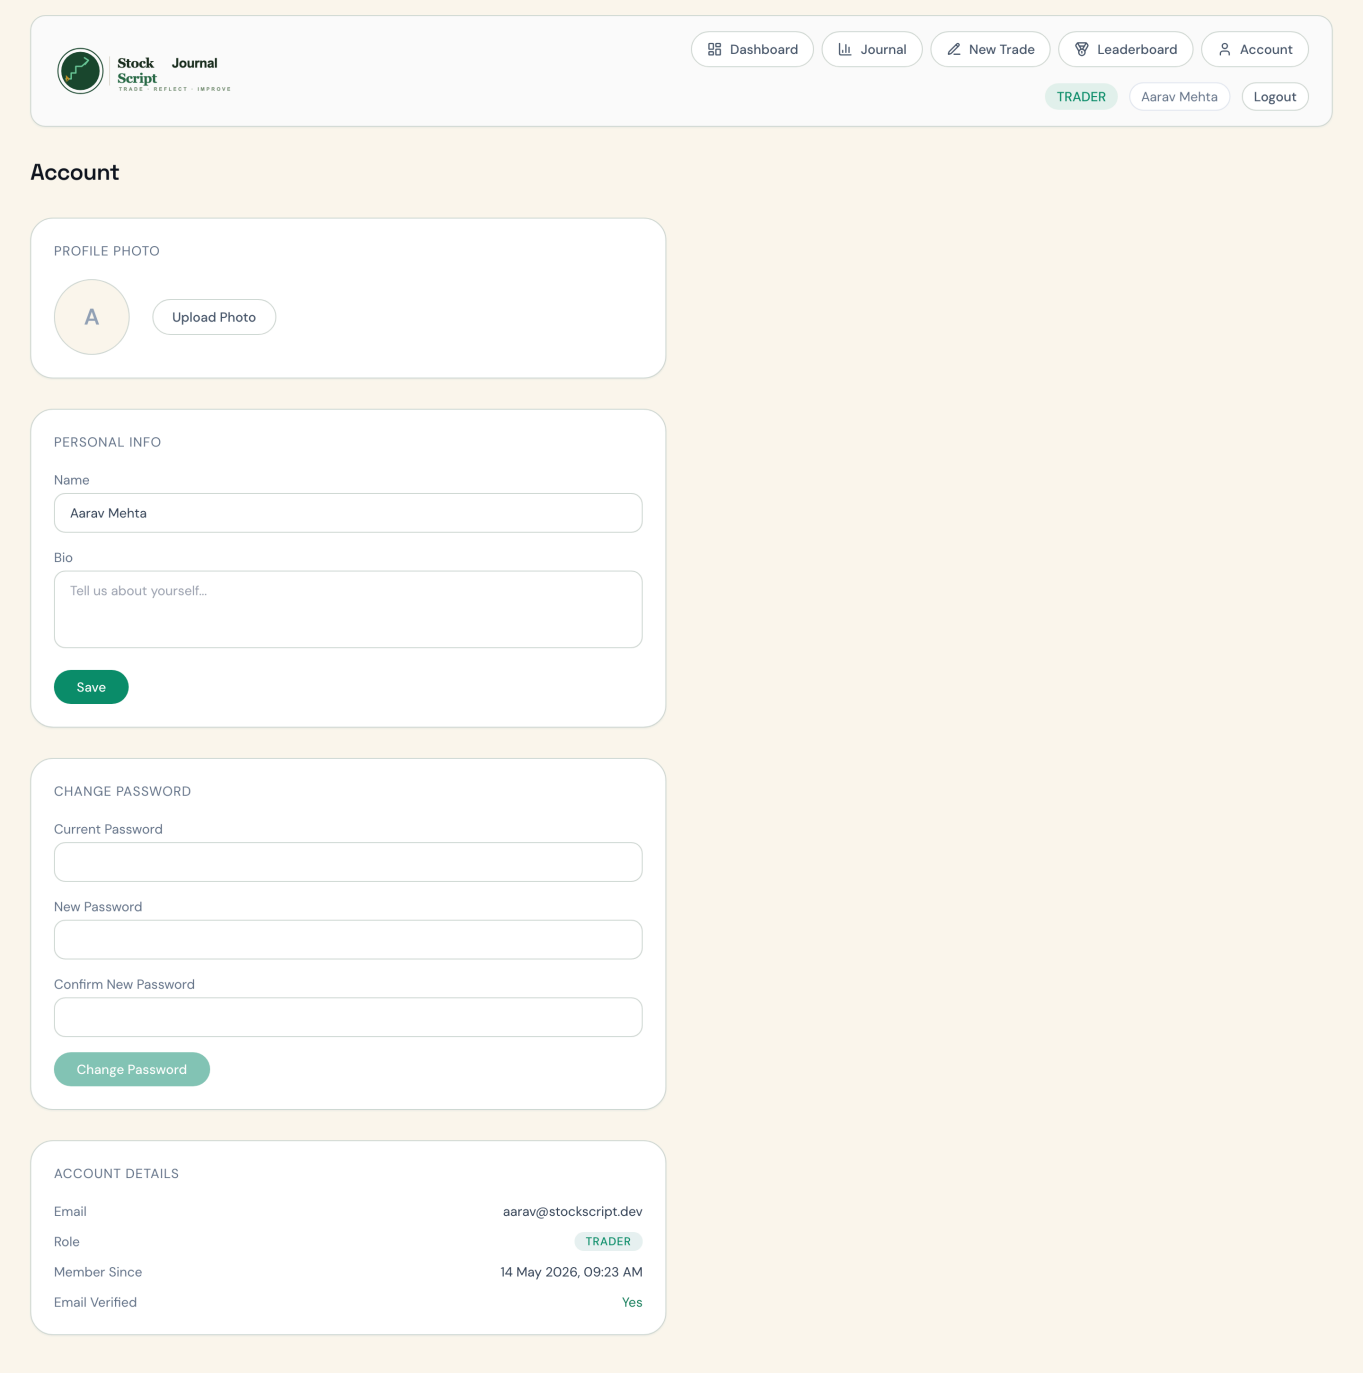

What You'll See

- A **podium** with the top 3 traders
- A **full rankings table** below with everyone's score
- Click **"View →"** on any trader to see their full detail

---

9. Account Settings

Click **Account** in the navigation.

The most important setting here is **Portfolio Capital**. This is the total amount of money you trade with (e.g., ₹5,00,000).

> ✅ **Set this right away.** Without it, StockScript can't calculate your allocation % or impact %. Every number on the dashboard depends on this.

---

10. Quick Tips for Daily Use

Every Day

- ✅ Set **EOD closing prices** for your open trades so your P&L is accurate
- ✅ Log new trades as soon as you take them (before you forget the details)
- ✅ Review your **Dashboard** to see how you're trending

Smart Habits

- **Use tags** consistently (`breakout`, `mean-reversion`, `option-selling`) — later you can see which strategy works best
- **Write notes** before entering the trade, not after — it captures your real rationale
- **Upload chart screenshots** right after logging — they're worth a thousand words in your post-trade review

Fixing Mistakes

- **Wrong entry?** Click the ✏️ pencil on any row to edit
- **Duplicate trades?** Check both boxes and click **"Merge"**
- **Too many trades to enter?** Use the **CSV Import** tab to upload your broker's trade book

---

Need help?

Problem	Solution
Can't log in	Use **"Forgot password?"** on the login screen
CSV import fails	Check your file is from one of: Zerodha, Groww, Angel One, Dhan
Competition questions	Contact your admin
Bugs or suggestions	Tell the development team

Trying it out?

Remember — you can explore everything with:

Email	`aarav@stockscript.dev`
Password	`Trader@123`

All sample data is pre-loaded so you can click around and see real charts, trades, and numbers.

Happy trading! — The StockScript Team
